

LASH LIFT & TINT AND BROW LAMINATION AFTERCARE

FIRST 24 HOURS

- Keep the treated area dry for 24 hours
- Avoid the following:
 - Heat & steam (including cooking over a stovetop or oven)
 - Direct sunlight
 - Saunas and swimming
 - Oils (may cause lash lift to fall prematurely)
 - Facial lotions & creams
 - Makeup
 - Shampoos
 - Face wash
 - Makeup remover wipes/pads
 - Any other treatment in the same area
 - Over touching the treated area - this can add oils from your hands/fingers, which may result in spots on tinted areas & the lift falling prematurely.
- Due to the lashes and/or brows being malleable after treatment, sleeping on your side or stomach may cause one or both sides to become misshapen. Eyelashes may lose their curl. To avoid this, we advise sleeping on your back during the initial 24-hour period.

LONG-TERM CARE

- Applying Lash & Brow Toxx conditioner daily is essential in maintaining the health of your lashes and/or brows after your treatment. Begin usage after the initial 24-hour period.
- Important notes about brow lamination only:
 - Do not apply Retin-A, AHA, or exfoliate around the brow area for three days before or after the treatment.
 - Do not use self-tanning products on the face 48 hours before or after the treatment.
 - Keep in mind that the tinting results will be darker and more defined immediately after your treatment and oil-based makeup remover can cause the tint to fade faster.
